

FT-292 Wychwood Fountain

PRODUCT INFORMATION

FOUNTAIN INFORMATION:

This fountain holds approximately 1/2 gallon of water.

No available fountain covers are recommended for this fountain.

No refill device or submersible lights are suggested for this fountain

Pump Kit Parts List

PK120-LV pump with transformer (1)
#7 stopper (1)
2" length of PermaGum Putty (1)
Approx. 6" length of 1/2" Black Non-kink tubing (1)
Hose clamps (2) **

* Hose clamps may be used as flow restrictors

TOOLS REQUIRED:

Bubble Level

Flat Head Screwdriver

Scissors

PUMP INFORMATION:

WP450LV – 120 GPH Low Voltage Pump
16 FT cord length

Fountain bowls/tops and other fountain components, which collect water, should not be left outside in the winter since any component, which fills with water and freezes may crack. Likewise, components such as pedestals, which remain in a basin, filled with water, which then freezes, may also crack or crumble. Ideally, therefore, a fountain should always be stored indoors or in a dry protected place such as a covered porch away from the elements. However, if a fountain must be left outside:

- (1) Remove pump, rubber stoppers, drainpipes, finials, and other small components for storage indoors. Note that stoppers or drainpipes are removed to allow drainage in the event water accumulates in any basin.
- (2) Raise fountain base from ground with wood strips so that base will not freeze to the ground surface.
- (3) Cover or wrap the fountain with burlap or other absorbent material (old blanket or towel) and then cover securely with plastic, making sure that water will not accumulate in the basin or other fountain component and freeze;
- (4) Check fountain periodically to ensure that plastic is secure, and water is not accumulating in any fountain component.

- G E N E R A L F O U N T A I N T I P S -

Install fountains on a level surface. You will need a properly grounded 110-volt (AC only) GFCI protected receptacle near the fountain for your pump. All pumps are submersible and must be completely underwater to function properly. Test all pumps and adjust to full output prior to assembly. It is not recommended that fountains be placed directly on grass or dirt. Position the channel opening at the base of each fountain toward the electrical outlet to be used since the pump cord will be threaded through this opening.

FT-292 Wychwood Fountain

ASSEMBLY INSTRUCTIONS

Assemble your fountain on a level surface capable of holding a minimum of 45 pounds with an approximate 1 square foot footprint.

FT-292C (21 lbs)
16.25"W x 6.5"H

FT-292B (2 lbs)
5.75"W x 3"H

FT-292A (7 lbs)
10"L x 9.5"W x 6"H

1. Place the adhesive dots provided evenly around the bottom of the basin (FT-292C) to prevent scratching anything beneath the fountain.
2. Position the basin (FT-292C) where the fountain is to be installed, ensuring that it will be level.
3. Assemble the pump kit.

- a. **NOTE: Be sure to use the appropriate size adapter provided with the pump and do not plug the pump into the transformer until assembly is complete.**
- b. Using a hose clamp and screwdriver, attach the 1/2" end of the non-kink tubing to the pump outlet.
- c. Place one end of the PermaGum putty onto the pump cord approximately about 6"-8" from the pump.
- d. Wrap the putty around the cord once. See image "A"
- e. Place the stopper around the putty. Keep the top edge of the putty and stopper flush. See image "B"
- f. Cut off the excess putty so that it is even with the outer edge of the slit.

4. Feed the pump cord all the way through the hole and the channel in the basin (FT-292C) to ensure the fountain will be level.
5. Firmly press the stopper into the hole while pulling the cord the remainder of the way.

- a. Use the handle of the screwdriver to press the stopper down as far as possible. See image "C"

6. Fill the basin enough to cover the pump completely with water to check for leaking.

- a. If leaking occurs...

- i. Remove the stopper and repeat step 5 again.
- ii. Use some of the excess putty to seal the cord around the top of the stopper. See image "D"
- iii. Let the fountain dry completely, then use 100% clear silicone to seal around the pump cord and perimeter of the stopper.

1. Silicone must set for 24 hours before adding water

7. Place the pump house (FT-292B) over the pump and centered inside of the large bowl (FT-292C).

8. Using a hose clamp and screwdriver, secure the other end of the 1/2" non-kink tubing to the copper pipe protruding from the bottom of the small bowl (FT-292A).

9. Center and lower the small bowl (FT-292A) onto the pump house (FT-292B)

10. Connect the pump cord to the transformer.
